

Vibe-to-Playlist Generator – MVP Specification

1. Project Overview

The Vibe-to-Playlist Generator is a Remix.js project that integrates with the Spotify API. It allows users to log in with Spotify, choose a musical vibe, generate recommended tracks, and create playlists directly in their Spotify account.

2. MVP Goal

Enable users to generate Spotify playlists based on mood (vibe) with minimal friction, while practicing real-world Remix.js patterns such as authentication, loaders, actions, and secure session handling.

3. MVP Pages & Functionality

3.1 Landing / Login Page

- Login with Spotify via OAuth
- Redirect authenticated users to generator page

3.2 Vibe Generator Page

- Select one vibe (Chill, Upbeat, Dark, Soft, Focus)
- Adjust 2–3 sliders (Energy, Valence, Danceability or Tempo)
- Generate 25 recommended tracks
- Regenerate recommendations with same settings

3.3 Preview & Create Playlist

- Preview recommended tracks
- Auto-generate playlist name and description
- Create playlist and add tracks to Spotify

3.4 History Page

- List generated playlists per user
- Open playlist directly in Spotify

4. User Flow

- User opens app and logs in with Spotify
- User selects vibe and adjusts sliders
- App generates track recommendations
- User previews and creates playlist
- Playlist saved to Spotify and history

5. MVP User Stories

- As a user, I want to log in with Spotify so playlists can be created in my account.
- As a user, I want to select a vibe so recommendations match my mood.
- As a user, I want to preview tracks before saving them.
- As a user, I want to regenerate playlists if I don't like the results.
- As a user, I want to revisit my generated playlists later.

6. Definition of Done

- Spotify OAuth works end-to-end
- Recommendations consistently return 25 tracks
- Playlists are created and populated successfully
- Generated playlists persist in history
